With the inquiries and accusations running rampant in the press, on the Hill and at DOJ, I cannot believe that this G-392 and the incomplete, inaccurate "analysis" that one of the hijackers was the son of a diplomat was even printed, sent forward and disseminated months after it was determined not to be the case. How could someone in HQINT or Orion not intercept this and toss it in the trash can where it belongs.

I can't get the 392 open; every time I try, this computer hangs up. But, this comes as news to me, and probably does to everyone else here as well. It's often the case that these damned 392s float around, and arrive at NSU long after they've hit other agencies -- usually, I've found, when they're the least trustworthy.

At one point, I raised with HQINT (Savini and some others) that they needed protocols to preclude this from happening; I knew when I raised it that it was falling on deaf ears. Protocols, schmotocols...too much like (1) work and (2) regimentation...God forbid.

I recieved an INS G-392 through FBI email via State Dept (so much for our own system). The G-392 implies that one of the hijackers was an A-1 and son of a diplomat. The FBI ruled this out some time ago and wrote an EC to hopefully put the confusion to an end. Just out of curiosity, did anyone at NSU see this G-392 or did it just go out to the community without copying our own divisions?  
Attached G-392 and FBI EC.

When I tried to send my T&A my computer would not send attachments but it is appearing on my message so here goes.....
